

The CETP Refresher Training

class will refresh your knowledge of the important concepts and tasks covered in Basic Principles and Practices of Propane. It also includes new information added to the course.

CETP Refresher will build on the previous curriculum to provide updates on codes, standards, regulations and state law. We will revisit basic concepts and review any important safety, equipment or operational developments.

The source module and lesson from the full course will be identified for each topic covered. Note that not all modules and lessons in the full course are covered in refresher training.

What to Expect:

Students will take quizzes and tests to assess their pace of learning. A multiple-choice test will be administered at the end of the class.

Tests are graded by a third party and the results are mailed to each company. Registrants must be in attendance for the entire session. A score of 70% or higher is required to pass the test.

Registration Includes:

The cost of student and test materials, pencils, markers and other materials. Lunch and refreshments are also provided. Other meals, lodging and travel are not included in the class fee.

NFPA 58 requires both initial and subsequent refresher training be documented.

Copies of NFPA 58, the LP-Gas Code, are available for purchase separately. See accompanying brochure for order information or call MPGA.

CETP REFRESHER TRAINING

WHO SHOULD ATTEND?

CETP Refresher Training is available for students who have previously passed a state-approved CETP class such as Basic Principles and Practices, Vapor Operations, Bobtail, Transport, or other multi-day CETP class. Prior online classes will NOT meet this requirement.

Refresher Training must be provided at least every three years and is not meant to be a complete retraining. Refresher training will cover the normal job functions the employee is expected to perform. Important concepts, changes in procedures or requirements, or any application that may affect the employees' primary duties within the scope of NFPA 58 will be included in the refresher training program.
